

## Extension Pendants

SWOS's lightweight synthetic extension pendants allow customers a quick fix for unexpected depth rating challenges associated with wire systems, or to easily store supplemental rope on deck for situations when a primary line does not have enough reach.

Our top quality synthetic pendants can be made to any specific gravity requirement, add no weight to the system when deployed subsea, yield maximum strength-to-weight ratio, and provide low stretch and wear resistance for ease of handling and extended service life. Protective jackets and filter barriers are available to eliminate sediment ingress if the ability to wet park is required.

## Platform Towing

SWOS's HMPE fiber ropes provide optimum strength, handling, and service life for commercial marine applications including Platform Towing.

Customers who have partnered with SWOS for rig tow outs have benefited from simplified connections, reduction in hardware, quicker rigging and knock down times, and an overall safer operation. With dozens of tow outs under our belt, SWOS has assisted companies from the FEED stage on down to the actual rig up. Whether maneuvering a platform among tight quarters in port, upon the open waters, or transitioning into a station keeping pattern, SWOS has the experience to help. Inspection, reporting, and inventory services are available after use if you'd like to reuse the lines on your next project.
